NEW PRESS INCREASES BRICK OUTPUT -- Praha, No 193, 20 Jul 49

A new press, the first of its type, will make possible the production of 6,100 bricks per hour. In an 8-hour work day, 12 to 13 million bricks can be turned out in one year, provided no difficulties are encountered. With the new press less electric current is used and good-quality molds are produced. It will also be possible to turn out complex ceramic and brick forms. If suitable equipment for pressing raw materials and removing pressed bricks can be produced, production capacity will be increased. According to experiments conducted recently in Perinok, the maximum number of bricks turned out by this new press was 6,740 in one hour. The construction of the press was a result of suggestions of the enterprise management of the Western Slovak Brick Factories.
